Education

University of Minho, Bachelor's and Master's Degree in Computer Engineering

- GPA: 16 / 20
- Specialization in **Application Engineering** and **Cryptography & Information Security**.

Cambridge English, Certificate in Advanced English (CAE)

- C1 (Advanced) - 185

Experience

Software Engineer, Critical Techworks – Porto, Portugal 2025, March - Present

- Built, operated and supported a multi-partitional and multi-regional **production 3D application streaming platform**, troubleshooting production issues across backend services, cloud infrastructure and enterprise integrations.
- Designed and implemented **scalable backend services** (Node.js/TypeScript) for access control, enterprise identity integration, cost visibility, and streaming session lifecycle management
- Maintained **AWS** infrastructure using **Terraform (ECS, EC2 Auto Scaling, DynamoDB, SQS and S3)**, diagnosing infrastructure issues and improving **deployment reliability** across multiple environments.
- Implemented a **distributed, asynchronous rendering pipeline** using **SQS**-based job queues (AWS), auto-scaling groups and **Go** to handle concurrency workloads reliably
- Integrated **service-to-service communication**, with OAuth2 and M2M tokens
- Improved **system reliability and performance** by tuning resource allocation, adding health checks with **Helm and ArgoCD** and monitoring via **Grafana** and **AWS CloudWatch** and added custom metrics with the **Prometheus** SDK, and resolving production issues affecting streaming quality
- Improved the whole **deployment process** of new releases by architecting and designing new automations of routine repetitive relative tasks.

Fullstack Developer Intern, Emvenci – Lisbon, Portugal October 2023 - July 2024

- Implemented new module in the **backend** and **frontend** using **Go & Typescript** with **Angular**.
- Fixed several bugs in the **backend** and **frontend** without compromising code quality.
- Created scripts to automate repetitive tasks using **bash & Go**.
- Utilized **Elasticsearch**, **RabbitMQ**, and **Logstash** to implement highly scalable and efficient solutions.

Fullstack Developer Intern, Wiseverge – Braga, Portugal 2022, July - August

- Developed **frontend** services using **Typescript**, **React** and **NextJS**.
- Developed **backend** solutions using **Firebase**.
